Infection Detection

Orientation Webinar

January 22, 2019
1:00 PM

Presented By:
Maryam Alabood
Quality Improvement Specialist
469-916-3803
malabood2@nw14.esrd.net
Network 14 is a non-profit organization incorporated in Texas and provides services on behalf of the Centers for Medicare & Medicaid Services (CMS) to kidney patients and their providers.

**Our Mission**

To support equitable patient- and family-centered quality dialysis and kidney transplant health care through the provision of patient services, education, quality improvement, and information management.
NETWORK STAFF

Mary Albin, Executive Director

Quality Improvement Department

Dany Anchia, RN, QI Coordinator
Javoszia Sterling, QI Analyst

Betrice Williams, Outreach Coordinator

Maryam Alabood, QI Specialist*

*denotes project lead

Project components
  - NHSN Requirements
Sustainability
CMS Watch List
Wrap up

Location of project materials: [http://www.esrdnetwork.org/infection-detection](http://www.esrdnetwork.org/infection-detection)
**Goal:** Reduce the national rate of bloodstream infections (BSIs) in dialysis patients by 50%, to achieve the 5 year national target to improve health of all ESRD patients living in the US.

- **Purpose:** The Network is contracted to develop a plan to reduce the rates of BSIs in patients with end stage renal disease (ESRD) because of their increased vulnerability to healthcare-associated infections (HAIs).

- **Activities:** Will focus on reducing BSIs by
  - Support ESRD facilities use of NHSN and the CMS reporting requirements
  - Participating in HAI LAN
  - Assist facilities with implementation of CDC core interventions and increase awareness
  - Reduce long-term catheters (LTCs)
  - Improve communication across care settings (especially between hospitals and dialysis facilities)
  - Encourage facilities to join Health Information Exchange (HIE)
What is the Standardized Infection Ratio (SIR)?
The (SIR) is a summary measure used to track HAIs at a national, state, or local level over time. The SIR adjusts for various facility and/or patient-level factors that contribute to HAI risk within each facility. In HAI data analysis, the SIR compares the actual number of HAIs reported to the number that would be predicted, given the standard population (i.e., NHSN baseline), adjusting for several risk factors that have been found to be significantly associated with differences in infection incidence.

Why not the PBC rates?
These rates, or pooled means, were calculated using aggregate data reported to NHSN. The total number of infections was divided by the applicable number of patient days for that time period. However, a problem with strictly using pooled mean rates is that they cannot reflect differences in risk between populations, and therefore lose comparability over time and across entities.
Baseline Data: Q1/Q2 2018 (January – June)
Network 14 Average: -1.11
Focus Facility Average: 1.75

- Network 14 facilities eligible to report for all of 2018 (N=573)
- Facilities ranked by highest Excess BSI Rates (N=286)
- Selection of 50% of Network 14 facilities with the highest Excess BSI Rates (N=115)
- Selection of 20% of Network 14 facilities with the highest Excess BSI Rates (N=115)
- Total number of Focus Facilities from the 20% cohort (N=115)
**NHSN DATA**

INFECTION PREVENTION STATION

Conversation Starter to Prevent Infections in Dialysis Patients

How does this facility involve patients and their families in infection control activities? Are patients encouraged to speak up when they see a concerning practice (for example, a staff member who does not wash their hands)?

Dialysis centers should educate and empower patients to help prevent infections and advocate for a safe care environment. Talk to your social worker or facility administrator for ideas on how you can get involved.

How does this facility ensure that all patients receive necessary vaccines to prevent illness (such as Hepatitis B, influenza, and pneumococcal vaccine)?

Patients on dialysis have weakened immune systems and should get certain vaccines to help prevent getting sick.

How does this facility make sure that dialysis center staff are vaccinated against the flu every year?

Staff members can spread the flu to patients. Requiring dialysis center staff to get vaccinated each year can help prevent the spread. Dialysis centers should also have policies that support staff who are sick.

How does this facility check all patients for Hepatitis C infection?

All new dialysis patients should be tested for hepatitis C when they are first started on dialysis. This test is important because it can detect hepatitis C before it becomes a chronic infection. Testing is the only way to know if patients have hepatitis C and to prevent the infection from spreading in the facility.

Does this facility provide medications in a separate room away from dialysis stations to avoid contamination?

Medications for infection should be prepared away from patient treatment areas to keep them safe from germ contamination. More information about infection control can be found at www.cdc.gov/mipatientprotection.org.

I AM A RENAL PATIENT. Important info about my veins:

- NO IVs or blood draws on my RIGHT/LEFT arm,
- If IV or blood draw is required, use my hand veins or my other arm,
- NO BPs on my fistula or graft arm (if fistula or graft in place),
- If a long-term central line is required, use tunneled internal jugular line,
- Use PICC line as last resort.

CLEAN HANDS COUNT

No matter where you treat patients, clean hands count.

Did you know...

Number of procedures performed correctly = 
Total number of procedures observed during audit =

**ADDITIONAL COMMENTS/OBSERVATIONS:**

**Ensure the patient has left the dialysis station before disinfection is initiated.
Checklist: Dialysis Station Routine Disinfection

This list can be used if there is no visible soil on surfaces at the dialysis station. If visible blood or other soil is present, surfaces must be cleaned prior to disinfection. The proper steps for cleaning and disinfecting surfaces that have visible soil on them are not described herein. Additional or different steps might be warranted in an outbreak situation. Consider gathering necessary supplies prior to Part A.

**Part A: Before Beginning Routine Disinfection of the Dialysis Station**
- [ ] Disconnect and take-down used blood tubing and dialyzer from the dialysis machine.
- [ ] Discard tubing and dialyzers in a leak-proof container.
- [ ] Check that there is no visible soil or blood on surfaces.
- [ ] Ensure that the priming bucket has been emptied.
- [ ] Ensure that the patient has left the dialysis station.
- [ ] Discard all single-use supplies. Move any reusable supplies to an area where they will be cleaned and disinfected before being stored or returned to a dialysis station.
- [ ] Remove gloves and perform hand hygiene.

**Part B: Routine Disinfection of the Dialysis Station – AFTER patient has left station**
- [ ] Wear clean gloves.
- [ ] Apply disinfectant to all surfaces in the dialysis station using a wiping motion (with friction).
- [ ] Ensure surfaces are visibly wet with disinfectant. Allow surfaces to air dry.
- [ ] Disinfect all surfaces of the emptied priming bucket. Allow the bucket to air dry before reconnection or reuse.
- [ ] Keep used or potentially contaminated items away from the disinfected surfaces.
- [ ] Remove gloves and perform hand hygiene.

*Do not bring patient or clean supplies to station until these steps have been completed.*

CATHETER CONNECT/DISCONNECT CHECKLIST

---

**Checklist: Hemodialysis catheter connection**

- Wear mask (if required)
- Perform hand hygiene
- Put on new, clean gloves
- Clamp the catheter and remove caps
- Scrub catheter hub with antiseptic
- Allow hub antiseptic to dry
- Connect catheter to blood lines aseptically
- Remove gloves
- Perform hand hygiene

---

**Checklist: Hemodialysis catheter disconnection**

- Wear mask (if required)
- Perform hand hygiene
- Put on new, clean gloves
- Clamp the catheter
- Disconnect catheter from blood lines aseptically
- Scrub catheter hub with antiseptic
- Allow hub antiseptic to dry
- Attach new caps aseptically
- Remove gloves
- Perform hand hygiene

### ADDITIONAL COMMENTS/OBSERVATIONS:

[Blank space for comments]

[Image of CDC Dialysis Collaborative logo, National Center for Emerging and Zoonotic Infectious Diseases logo, and End Stage Renal Disease Network of Texas logo]
CATHETER EXIT SITE CARE CHECKLIST

Checklist: Hemodialysis catheter exit site care

☐ Wear mask (if required) and remove dressing
☐ Perform hand hygiene
☐ Put on new, clean gloves
☐ Apply skin antiseptic
☐ Allow skin antiseptic to dry
☐ Do not contact exit site (after antisepsis)
☐ Apply antimicrobial ointment*
☐ Apply dressing aseptically
☐ Remove gloves
☐ Perform hand hygiene

* Use an ointment that does not interact with catheter material
Checklist tools for each observation audit should be used monthly with at least one patient and reported in the monthly survey.

- Dialysis Station Routine Disinfection
- Catheter Connection Checklist
- Catheter Disconnection Checklist
- Catheter Exit Site Care Checklist

Observations must be entered into NHSN

- Schedule of due dates will be supplied, must be entered by last day of the month
- Monthly email reminders will be sent
- Maintain at least 2 individuals in your facility trained with access to enter data into NHSN
- Prevention Process Measures (PPM) must be built for entry of the four CDC Audit Tools.
  - DO NOT SEND THE OBSERVATION AUDITS TO THE NETWORK
PROJECT COMPONENTS

NHSN Monthly Audits

CDC Core Interventions

NCC HAI LAN & HIE

Patient Engagement
CDC CORE INTERVENTIONS

• Complete CDC Core Intervention Education each month
  • 9 months remaining in project, 9 topics on the document

• Schedule of topics will be placed on the website with due dates

• Reporting document will be placed on website and complete survey by the last day of each month
* 1. Select your facility from the dropdown list.

If your facility is not listed above, enter your CCN AND full facility name.

* 2. Complete the below information.

First and last name of the person completing this survey.

Email address of the person completing this survey.

Title of the person completing this survey.

* 3. Rank your facility's **CURRENT** level of implementation of the below CDC Core Intervention for dialysis bloodstream infection (BSI) prevention.

**Surveillance and Feedback using NHSN**
Who Can Join?

- Members include **individuals**, such as staff from individual clinics, nephrologists and nephrology nurses, dialysis technicians, leaders in infection prevention and/or patient safety, dialysis educators, patients, caregivers, and others.

Facility Responsibility

- At least one staff member participates
- Join the CDC Coalition, it’s **FREE** ([www.cdc.gov/dialysis/coalition/members.html#join](http://www.cdc.gov/dialysis/coalition/members.html#join))
- Members will help promote and distribute the Coalition’s materials and messages.
PROJECT COMPONENTS

- CDC Core Interventions
- Patient Engagement
- NHSN Monthly Audits
- NCC HAI LAN & HIE
Facility’s Patient Clinic Committee members reviewing the Conversation Starter and the Lead Patient Committee member, Juan Morales, demonstrating teach back with the clinic staff.
BSI QIA PATIENT ENGAGEMENT

OPTION 1
National Recognition Events

OPTION 2
Network’s Patient Engagement Calendar

OPTION 3
Facility’s Patient Engagement Plan
Patient Engagement Activities will be promoted through the recognition and involvement of nationally recognized patient days.

- Patient Recognition Day/Week (Feb 3, 2019/Feb 1-7, 2019)
- World Kidney Day (March 14, 2019)
- Patient Safety Awareness Week (March 10-16, 2019)
- Patient Experience Week (April 27-May 1, 2019)
- World Hand Hygiene Day (May 5, 2019)
- Sepsis Awareness Month (September 2019)
- Global Handwashing Day (October 15, 2019)
- International Infection Prevention Week (October 14-20, 2019)
- US Antibiotic Awareness Week (November 12-18, 2019)

(Network 14 strongly encourages participation of facility patient representatives)
OPTION 1

- **PE Activity: June 2019**
  - Network Calendar Activity
  - Facility Planned Activity

- **PE Activity: July 2019**
  - Network Calendar Activity
  - Facility Planned Activity

- **PE Activity: August 2019**
  - Network Calendar Activity
  - Facility Plan Activity
Take part in your care
It's your life!

How can I increase my engagement this month?

- Know your medicines
  - Make a complete list of every medicine you take, every pharmacy you have.
  - Update your list every month.
  - Ask what each of your medications is for and what side effects to watch for.
  - Fill or refill your prescriptions on time.
  - Talk to your doctor before you stop taking a medicine or start taking another.
  - Some medicines should not be taken with other medicines. Ask your pharmacist about possible interactions before you take any new med.
  - Put a copy of your medications in your wallet, your refrigerator/flowproof bag, and in your glove compartment in your car.

- Prevent infection and protect your access, if you have one
  - Always wash your hands before and after treatment. It could save you a lot of money.
  - Tell the staff at your facility to wash their hands and wear gloves when they make a visit.
  - If your access does not feel "right", get it checked immediately.

- Go to support groups if they are offered in your area or look for online support
  - Learn more about kidney disease and treatment options by seeking support and support groups. Don’t wait for someone else to tell you.

- Know your options
  - Attend your Plan of Care meetings at your facility and if you have questions, continue to consult with your dietitian to learn how your diet can improve.
  - Talk with a pharmacist if you have any questions about insurance and drug costs.
  - Talk with the social worker if you want to work, go to school, or volunteer.

- If you understand all of your choices, YOU have more control over your care.

Word Search - Find the following words that will help you be part of your care:
- Family
- Patient
- Engage
- Learn

This information was created by ESRD patients for ESRD patients. To file a complaint for questions, contact the ESRD Network of Texas at 1-877-866-4435 (phone), 911 E. 16th St., Suite 200, Dallas, TX 75204, or www.esrdnetworkoftx.org.
OPTION 3

Facility’s Patient Engagement Plan

- Existing patient engagement plan at the facility can be utilized
  - Specify activity completed each month in monthly survey
  - Provide documentation of all activities completed to the Network (by fax or email) DO NOT INCLUDE ANY PATIENT PHI
  - Complete survey questions around the plan’s effectiveness and patient level of engagement
  - Will be reviewed by the NW and PAC SME for approval
Every dialysis in Texas should have a FPR who will act as a link between patients and the facility staff.

- Recommend 1 FPR for every shift
- Consider diversity and predominant and secondary languages spoken by patients
- Use Network FPR Toolkit to orient staff and patients to FPR role

Responsibilities

- Assist facility
  - Gather information and ideas from patients
  - Distribute information to patients
  - Share ideas from patients with facility staff
  - Co-design strategies to improve the delivery of care and patient information
  - Support Patient and Family Engagement activities, including QI activities
  - Promote Patient and Family Centered Care
FACILITY PATIENT REPRESENTATIVE (FPR)

http://esrdnetwork.org/patients-families/patient-representatives/

What is a Facility Patient Representative (FPR)?

Every dialysis clinic in Texas should have a Facility Patient Representative (FPR) between patients and the facility staff. The attached handbook and tools will assist training patients to become valuable members of the team.

To learn more about the FPR program, contact your facility social worker and request the FPR Toolkit!

FPR Toolkit - English - Spanish - Revised 05/2015

FPR FAQs

- FPR applications are for facility use.
- Please have the patient fill out the application, designated facility staff will apply.
- All application material and signed agreements should be kept at the facility.
PROJECT COMPONENTS

- NHSN Monthly Audits
- CDC Core Interventions
- NCC HAI LAN & HIE
- Patient Engagement
The ESRD NCC HAI LAN has two primary purposes.

- The first is to improve information communication across care settings, with emphasis on communication between hospitals and dialysis centers caring for the same ESRD patients.
- The second is to increase awareness of and implementation of CDC Core interventions.

Facility Responsibility

- Attend the ESRD NCC HAI LAN every other month.
- Share identified interventions to improve the BSI rates from each LAN meeting with patients and staff.
GOAL: Join a Health Information Exchange (HIE) or another evidence-based highly effective information transfer system to receive information relevant to positive blood cultures during transition of care.

Facility Responsibility

- Learn about Health Information Exchanges (HIE)
- Join a Health Information Exchange
- Provide proof to the Network
Sustain the improvements made during the project after the project has ended
- **Start early**, at the beginning of the project with the end goal in mind
- Use SUSTAIN mnemonic to remember the seven steps of sustainability
- Complete and submit a Sustainability Plan for each project to Network toward end of project

Role of organizational culture and leadership in successful sustainability activities
Interventions are meant to drive results

Network monthly tracking will include analysis of progress versus baseline data

Trending will be reviewed, and if needed, an RCI may be necessary for your facility

This analysis will dictate the possibility of a facility being relieved of this project at the end of 2019. Analysis may also suggest to the Network that the facility should remain beyond the end of 2019.
Facilities failing to submit required documents for projects will receive:

- One written or emailed notice
- One notification via phone

If no response received from facility, the facility will be placed on the CMS Watch List, which will include:

- Report of non-compliance to corporate leaders
- Report of non-compliance with DSHS on monthly calls
- Report of non-compliance to CMS
Best Practices Video
- Covers hand hygiene, catheter connection/disconnection, and fistula/graft cannulation
- Procedure steps mirror the checklists

Catheter Scrub-the-hub Protocol
- Key step in catheter connection/disconnection

Checklist tools

Hand Hygiene Observation Protocol
NEXT STEPS

- Complete the Pre-Project Survey
  - [https://www.surveymonkey.com/r/HV67ZH6](https://www.surveymonkey.com/r/HV67ZH6)

- Have two NHSN trained associates
  - Setup Prevention Process Measures Module and confer rights to NW

- Begin to recruit a Facility Patient Representative, if you have one, inform them on how they can assist with this project

- Order laminated copies of the CDC Tools and “Days Since Last BSI” Poster [HERE](https://www.surveymonkey.com/r/bsiwebpoll) and start thinking about how you want to set up the Infection Prevention Station

- COMPLETE THE WEBINAR ATTESTATION!
  - [https://www.surveymonkey.com/r/bsiwebpoll](https://www.surveymonkey.com/r/bsiwebpoll)
Thank you for participating
