

Going Back to You!

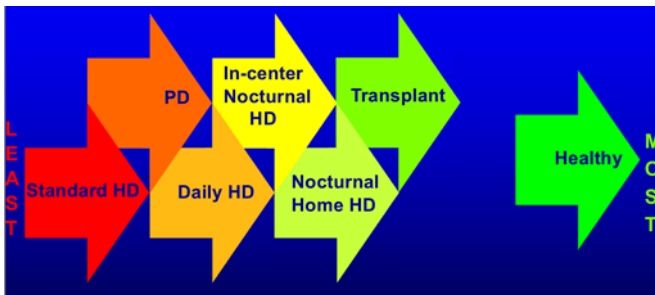

Promoting Home Dialysis and Transplant January, 2020

➤ **Ask Your Nephrologist: “Which dialysis treatment option would they choose for themselves if they needed dialysis?”**

Did you know that more than **90%** of Nephrologists would choose Home Dialysis (either Peritoneal Dialysis or Home Hemo Dialysis) as their treatment option if their kidneys failed?

Do you know how much clearance you achieve by each dialysis treatment?

At Kt/V of 1.3 per treatment...	Treatments per week	eGFR Equivalent	CKD Stage
Standard in-center hemodialysis (HD)	3	13.5	5
Short daily home HD	5	27.5	4
Nocturnal home HD	6	33.5	3

➤ Although Peritoneal Dialysis (PD) seems to achieve less clearance compared to the other home treatment options, it is actually the gentlest way to dialyze for your body. PD reserves your **Residual Kidney Function (RKF)** the most, which is important in helping to continue cleaning your body while you are off the machine.

Ask any questions of your treatment choice to “Modality Expert Team (MET)” today!
